

Unique Vacuum Solutions has been in the field of Vacuum Technology & helium leak testing equipment building and testing services, vacuum measurement instruments and related calibration services since 2001.

This includes, manufacturing and supply of custom built and standard vacuum systems / helium leak testing stations / components to the various R&D Organisations, Institutional & Industrial customers across the country.

To explain in detail: **Unique Vacuum Solutions-** a one stop solution for all the needs of:

- helium leak detection services (mass spectrometer helium leak testing),
- helium leak detectors
- helium calibrated leaks
- helium bombing stations
- helium leak test stations for various applications like aluminum castings, battery industry automobile components, etc.
- high vacuum products such as vacuum components, vacuum valves, flex metal bellows & hoses, spares
- vacuum measurement instruments like pirani gauges, penning gauges, Digital Thickness Monitors , and so on....

More about our helium leak test services...

Helium Leak Testing and Leak Detection has been the cornerstone of our business since we began in the year 2001. With **UVS** equipment and staff, we are capable of performing on-site field testing as well as in-house testing. We have the necessary equipment to perform all leak testing services in industry environments as well as laboratory conditions. **UVS** can perform almost any helium leak test method on a customer's site.

UVS competent engineering staff has the necessary knowledge and experience to develop testing procedures specific to customer requirements. This allows **UVS** the ability to accommodate all of our customers' needs in regards to leak testing.

We are equipped with state of the art- highly reliable helium leak detector which is compatible for all the types and methods of helium leak testing. The helium leak detector usable range is from 10-11 std CC/sec to 10-3 std CC/sec depending on the type of test and the test object.

UVS has specialized in conducting the helium leak testing in:

- ***Evacuation or vacuum method- tracer gas probe test***
- ***Evacuation method- hood test***
- ***Over pressure – hood test***
- ***Over pressure method – bombing test***
- ***Over pressure method- sniffer test***

HELIUM LEAK TESTING STATIONS BY UVS FOR VARIOUS APPLICATION:

1. For aluminium castings in vacuum chamber method:

2. For Long aluminum fabricated tubes with vacuum method:

3. For VRLA batteries in vacuum chamber method:

4. For sealed components in Bombing method:

5. Helium leak detector carts for multipurpose applications:

6. For Control Valves

7. For Sealed compressors leak testing in sniffer method :

8. For Li-Ion cells leak testing in vacuum chamber method :

9. For Rupture Disc helium leak testing:

10. Pressure decay test and gas filling station for compressors and gas lines

11. Vacuum decay test system

Our Mission Statement

Unique Vacuum Solutions is dedicated to provide Quality leak detection services and helium leak test stations. We shall support our customers with calibration services for helium leaks & vacuum measurement gauges, and also support customer with service and repair of high vacuum product
